Art Unit: 1714

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 4-14, 17-21 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP '235 translated by computer.

JP '235 discloses moisture absorbing tabular articles comprising zeolite with particle sizes of 1-20 μm , alumina and clay binder. These articles are taught as produced by pressing followed by calcination at temperatures up to 600 C.

Applicants claimed sorbent to binder ratio is seen as having been obvious to one of ordinary skill in the art desiring to balance adsorption capacity and crack and abrasion resistance of the final product.

Applicants claimed moisture content is seen as inherent to the compositions of the reference.

Applicants claimed thickness is seen as having been obvious to one of ordinary skill in the art desiring to tailor the article to a specific application.

Claims 3, 15, 16 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
